Data Notes: The source of data comes from the Kansas Immunization Information System (WebIZ). Data was pulled on July 24, 2023. KS WebIZ data are continually updated and reviewed to ensure data quality and completeness. All data shown are preliminary and subject to change. Vaccine providers outside of Kansas and through federal partnerships may not be reported to KS WebIZ and may not be captured in these data. All rates are estimates and are reported as they are in KS WebIZ as a percent (rate per 100 people) unless otherwise noted. The flu season typically ranges from October to May each year.
